

Time limit: 1000 ms Memory limit: 256 MB Ok, so now you feel you have reached the end of it and can stretch you hands and legs a little bit and relax till the competition ends, right??? Ehhhh, wrong! We have developed a last, special challenge that you will have only 10 minutes to solve so you have to hurry! Even worse, for this challenge we will answer NO QUESTIONS. We noticed every year how much you love procrastinating the registration to the contest. Always up until that last minute (sometimes even after :D) This year we thought of a way to "get even with you". First, scroll down until you reach the rest of the challenge description. This is exactly how we feel every year while we wait for you to register to the programming party.

With your programming language of choice, write a program that outputs a text with your feedback and submit it to the system. This task will not be scored and it is not mandatory.

Thank you for participating in the IEEEXtreme 13.0. We hope you had a lot of fun. See you next year!

## Standard input

Nothing on standard input.

## Standard output Output a text with your feedback to us.

Output a text with your feedback to i

## Constraints and notes

• Words  $\leq 200$
